Thanks, Karen!

Actually, I already did the thing I was going to do with methomyl – Christina is the lead on it and I just did the aquatic parts. Melissa is doing a much higher-level part in leading the whole process. But, we can talk about it at my general tomorrow. I am not sure of my role for future work in methomyl. I am haven't kept up with the recent discussions but I think

Yes, you can go ahead and work on methomyl ESA as Melissa is working on abamectin. I got the Eco scientist for July, so maybe you can be a panel review in August or September?

Thanks for always helping,

Karen

Hi Karen,

Thanks for compiling the list -- that is really helpful! I could probably be on the panel for emamectin if that slot is still open. Or, a later one might work (though I plan on being out the last week of July).

Also, on the list you have me listed as the biologist on abamectin, but Melissa P. is doing that one since PBO got postponed so I could work on methomyl ESA last year.

Thanks!

Donna

These are the chemicals.

Thanks

Karen
